Tesla Roadster 2

FULL ENGLISH TRANSCRIPT

All right, you're going to see some crazy stuff tonight. We need an audience to prove that it's not AI or SI, so you guys can tell people you saw it with your eyes, because what you see with your eyes you will not believe.

But you're going to see the results of what happens when you have a collaboration with the world's best car company and the world's best rocket company. And this is the culmination of incredible work by Tesla and SpaceX engineers working closely together to make something that you haven't seen in any movie, better than any James Bond car.

Well, I don't know, I've never seen anything like this. When I suggested this to the team, I thought, "Am I crazy? Maybe a little bit."

Exactly, am I crazy? Not at all, 100% sane. And then things kind of built upon themselves, and we're like, maybe we could do a little more of this and a little more of that.

What you'll see here, by the way, success is not guaranteed. It'll probably work, but if it doesn't work, we're at a safe distance.

Yes, let's fucking go. Let's see. Yes, but this is not an autonomous car.

Well, it is technically autonomous for this demo to make sure we don't kill anyone. Just in case. But this will actually be, long-term, the only manually driven car that Tesla makes.

And so, if you're going to have only one manually driven car, let's take it to the limits and way past the limits. I think it's an insane dream. Where are we guys? We got 10 seconds.

Seven, should we count it down? Well, it worked. Flying cars are real.

A friend of mine, Peter Thiel, once said that the future promised us flying cars, but instead we got 140 characters. Well, not anymore. That's not the last thing you'll see, by the way.

This car really sucks. It could suck the chrome off a trailer hitch, it could suck a tennis ball through a hose pipe, and it could stick upside down. Now you might say, how often do you want to stick upside down in a car? Maybe not that often.

But it actually has an actual benefit on the track or just driving, where the downforce of the car means you can corner incredibly well. It looks like you're breaking physics because the car sticks to the ground so hard.

Acceleration, cornering, it's going to crush every track record that has ever existed. Just to be clear, that is not a real human.

The car has obviously attitude control thrusters and main thrusters in the rear, so it can basically fly like a rocket. It could do rolls, it could do crazy gymnastics, whatever you want really.

Now I should say that this is not necessarily a safety-optimized car, but it takes the fun meter to 11 out of 10. That was just a little flight. Let's do a longer flight. We can go further.

This will be an actual car that's on the roads. I'm not sure it's necessarily legal in all jurisdictions, but there will be such a car that someone can own.

It's going to be pretty wild that you can have a rocket car. It's using an advanced, ultra-high-pressure air tank, so the car can recharge its air tank.

You don't need special propellant or anything like that; it literally is just going to puff itself up and be able to do these maneuvers whenever you'd like. The rear wing has a variable

pitch, so it can adjust the downforce dynamically.

It will do it automatically based on what it calculates you need when you're going around a track. Well, you got to break one second, obviously. I tested this the other day.

Can we put it up, guys? Can we put the test up? This goes fast. Well, I said less than one second.

There are cars, and then there's one car that has Mach diamonds. Yeah, 0.1 seconds, I think we'd destroy the human if we did that.

We anticipate being able to do better than that. It's like Newton's formula F=ma, or a=F/m, so as you increase force and decrease mass, you get more acceleration.

The production car will actually do better than that. We'll just ride the limit of not detaching the retina of the human in the car.

Top speed, of course, depends on your street, but it'll be a viable car. We're going to have a follow-on demo, or two, or four multiples.

I don't know if this is possible or not, but some people may know about Evel Knievel's attempt to jump the Snake River Canyon. And we thought this was crazy. We're going to have to go pretty fast to do that, like really fast. We're going to need a running start.

But the car can go over 230 miles per hour. Hopefully, we can get even faster, definitely much faster than that.

Well, I think you've got to crack halfway to the speed of sound, maybe Mach 0.5 or a little higher. Challenge accepted. Where we're going, you don't need tires.

Today marks the day that we build the first world's best flying car and the last best driver's car. We enter production in 2028, actually for real.

I think we might have one more little thing. Should we do it? Let's do the last thing.

Tesla Roadster 2

SENTENCE BY SENTENCE

All right, you're going to see some crazy stuff tonight.

好了，你们今晚将会看到一些疯狂的东西。

We need an audience to prove that it's not AI or SI, so you guys can tell people you saw it with your eyes, because what you see with your eyes you will not believe.

我们需要现场观众来证明这不是 AI 或电脑合成，这样你们就能告诉别人这是你们亲眼所见，因为你们亲眼看到的将会令人难以置信。

But you're going to see the results of what happens when you have a collaboration with the world's best car company and the world's best rocket company.

但当世界上最好的汽车公司和世界上最好的火箭公司合作时，你们将会看到这种奇妙的结果。

And this is the culmination of incredible work by Tesla and SpaceX engineers working closely together to make something that you haven't seen in any movie, better than any James Bond car.

这是特斯拉和 SpaceX 工程师们紧密合作完成的不可思议的集大成之作，我们打造出了你在任何电影里都没见过的东西，比任何詹姆斯・邦德的车都要强。

Well, I don't know, I've never seen anything like this.

嗯，我不知道，我反正从未见过像这样的东西。

When I suggested this to the team, I thought, "Am I crazy? Maybe a little bit."

当我向团队提议这件事时，我想，“我是疯了吗？也许有一点。”

Exactly, am I crazy? Not at all, 100% sane.

真的，我是疯了吗？完全没有，百分之百清醒。

And then things kind of built upon themselves, and we're like, maybe we could do a little more of this and a little more of that.

然后事情就自然而然地发展起来了，我们在想，也许我们可以多加一点这个，再多加一点那个。

What you'll see here, by the way, success is not guaranteed.

顺便说一句，你们接下来要看到的展示，成功是无法保证的。

It'll probably work, but if it doesn't work, we're at a safe distance.

它大概率会成功，但如果搞砸了，好在我们都在安全距离之外。

Yes, let's fucking go. Let's see.

是的，让我们直接开始吧，来看看效果。

Yes, but this is not an autonomous car.

是的，但这绝不是一辆自动驾驶汽车。

Well, it is technically autonomous for this demo to make sure we don't kill anyone.

好吧，为了确保演示不弄出人命，它在今天的技术设定上是自动驾驶的。

Just in case. But this will actually be, long-term, the only manually driven car that Tesla makes.

以防万一。但从长远来看，这实际上将是特斯拉保留制造的唯一一款人类手动驾驶的汽车。

And so, if you're going to have only one manually driven car, let's take it to the limits and way past the limits.

所以，既然你只能有一辆手动驾驶的车，那就让我们把它推向极限，甚至远远超越极限。

I think it's an insane dream. Where are we guys? We got 10 seconds.

我认为这是一个疯狂的梦。伙计们我们在哪儿了？我们还有 10 秒钟。

Seven, should we count it down?

还有7秒，我们一起倒数吧?

Well, it worked. Flying cars are real.

哇哦，它成功了。飞行汽车确实存在。

A friend of mine, Peter Thiel, once said that the future promised us flying cars, but instead we got 140 characters.

我的一位朋友彼得·蒂尔曾说过，未来承诺给我们飞行汽车，结果我们却只得到了 140 个字符。

Well, not anymore. That's not the last thing you'll see, by the way.

好吧，现在不一样了。顺便说一句，这还不是你们将看到的最后一项特技。

This car really sucks. It could suck the chrome off a trailer hitch, it could suck a tennis ball through a hose pipe, and it could stick upside down.

这辆车“吸力”极其恐怖。它能把拖车挂钩的镀铬层都吸掉，能把网球吸进水管里，还能倒着粘在天花板上。

Now you might say, how often do you want to stick upside down in a car? Maybe not that often.

现在你可能会问，谁会经常想要倒着开车呢？可能不经常。

But it actually has an actual benefit on the track or just driving, where the downforce of the car means you can corner incredibly well.

但它在赛道上或日常驾驶中确实有实际的优势，因为强大的下压力意味着你可以极其完美地过弯。

It looks like you're breaking physics because the car sticks to the ground so hard.

看起来就像打破了物理定律，因为汽车死死地贴在地面上。

Acceleration, cornering, it's going to crush every track record that has ever existed.

无论是加速还是过弯，它都将粉碎所有存在过的赛道纪录。

Just to be clear, that is not a real human.

澄清一下，车里坐着的不是真人。

The car has obviously attitude control thrusters and main thrusters in the rear, so it can basically fly like a rocket.

很显然，这辆车配备了姿态控制推进器和尾部主推进器，所以它基本上可以像火箭一样飞行。

It could do rolls, it could do crazy gymnastics, whatever you want really.

它可以翻滚，可以做疯狂的体操动作，随心所欲。

Now I should say that this is not necessarily a safety-optimized car, but it takes the fun meter to 11 out of 10.

我必须要说明一下，这并不一定是一辆以安全为最优先的汽车，但它把乐趣指数推到了爆表。

That was just a little flight. Let's do a longer flight. We can go further.

刚才那只是小飞一下。让我们来个长途飞行吧，我们可以飞得更远。

This will be an actual car that's on the roads.

这将是一辆真正在道路上行驶的车。

I'm not sure it's necessarily legal in all jurisdictions, but there will be such a car that someone can own.

我不确定它在所有国家和地区是否绝对合法，但肯定会有这样一辆人们可以拥有的车。

It's going to be pretty wild that you can have a rocket car.

你能拥有一辆火箭车，这简直太疯狂了。

It's using an advanced, ultra-high-pressure air tank, so the car can recharge its air tank.

它使用的是先进的超高压储气罐，汽车可以自行重新充气。

You don't need special propellant or anything like that; it literally is just going to puff itself up and be able to do these maneuvers whenever you'd like.

你不需要特殊的推进燃料之类；它会自动给气体加压，让你随时随地完成这些机动动作。

The rear wing has a variable pitch, so it can adjust the downforce dynamically.

尾翼有可变桨距，所以它可以动态调节下压力。

It will do it automatically based on what it calculates you need when you're going around a track.

它会根据其计算出的赛道行驶需求，自动进行调整。

Well, you got to break one second, obviously. I tested this the other day.

显然，你必须把百公里加速突破到一秒以内。我前几天测试过了。

Can we put it up, guys? Can we put the test up? This goes fast.

伙计们，我们能把实测画面放出来吗？这速度极快。

Well, I said less than one second.

刚才我说过，要低于一秒钟。

There are cars, and then there's one car that has Mach diamonds.

这世上有各种各样的汽车，但只有这一辆是带着马赫环的。

Yeah, 0.1 seconds, I think we'd destroy the human if we did that.

确实，如果是0.1秒，我想如果真那样做的话人类会被我们弄死的。

We anticipate being able to do better than that.

我们预计还能做得比演示成绩更好。

It's like Newton's formula F=ma, or a=F/m, so as you increase force and decrease mass, you get more acceleration.

这就像牛顿定律 F=ma 一样，也就是 a=F/m，所以当你增加力度并减少质量时，你就能获得更强的加速度。

The production car will actually do better than that.

量产车实际表现会更好。我们只是一直游走在让人类视网膜脱落的极限边缘而已。

We'll just ride the limit of not detaching the retina of the human in the car.

量产车实际表现会更好。我们只是一直游走在让人类视网膜脱落的极限边缘而已。

Top speed, of course, depends on your street, but it'll be a viable car.

关于最高速度，当然，这取决于你家那边的街道，但它绝对是一辆实用的车。

We're going to have a follow-on demo, or two, or four multiples.

我们接下来还会有一场后续演示，或者是两倍、四倍的震撼。

I don't know if this is possible or not, but some people may know about Evel Knievel's attempt to jump the Snake River Canyon. And we thought this was crazy.

我不知道这是否可能，但也许有人知道当年埃维尔·克尼维尔尝试飞越蛇河大峡谷的壮举。我们曾觉得那很疯狂。

We're going to have to go pretty fast to do that, like really fast. We're going to need a running start.

要做到那种特技我们得开得非常非常快。我们需要很长一段助跑。

But the car can go over 230 miles per hour.

但这车时速能超过 230 英里。希望我们能让它跑得更快，绝对比那快得多。

Hopefully, we can get even faster, definitely much faster than that.

但这车时速能超过 230 英里。希望我们能让它跑得更快，绝对比那快得多。

Well, I think you've got to crack halfway to the speed of sound, maybe Mach 0.5 or a little higher.

好吧，我认为你至少得突破音速的一半，也许是 0.5 马赫甚至更高。

Challenge accepted. Where we're going, you don't need tires.

挑战接受。在我们要去的地方，根本用不上轮胎。

Today marks the day that we build the first world's best flying car and the last best driver's car.

今天标志着我们打造了世界上第一辆绝佳的飞行汽车，以及人类最后也最极致的驾驶者之车。

We enter production in 2028, actually for real.

我们将在 2028 年正式投产，这次是真的。

I think we might have one more little thing. Should we do it? Let's do the last thing.

我想我们可能还有一件小惊喜。我们该开始吗？让我们呈现压轴戏吧。

Tesla Roadster 2

RHYTHM SCRIPT (CHUNK BY CHUNK)

S001

> All right, you're going to see some crazy stuff tonight.
> 好了，你们今晚将会看到一些疯狂的东西。

S002

> We need an audience to prove that it's not AI or SI,
> 我们需要一个观众群体来证明这不是 AI 或者 SI，
>
> so you guys can tell people you saw it with your eyes,
> 所以你们大家可以告诉人们你们用自己的眼睛看到了它，
>
> because what you see with your eyes you will not believe.
> 因为你用眼睛所见的东西你将不会相信。

S003

> But you're going to see the results of what happens
> 但你们将会看到发生这一切的结果，
>
> when you have a collaboration with the world's best car company
> 当你拥有一个合作，与世界上最好的汽车公司
>
> and the world's best rocket company.
> 以及世界上最好的火箭公司时。

S004

And this is the culmination of incredible work
而这是不可思议工作的集大成之作，

by Tesla and SpaceX engineers working closely together
由特斯拉和 SpaceX 工程师紧密合作完成，

to make something that you haven't seen in any movie,
去制造一些你在任何电影里都没见过的东西，

better than any James Bond car.
比任何詹姆斯・邦德的车都好。

S005

Well, I don't know, I've never seen anything like this.
嗯，我不知道，我从未见过像这样的东西。

S006

When I suggested this to the team,
当我向团队提议这件事时，

I thought, "Am I crazy? Maybe a little bit."
我想，“我是疯了吗？也许有一点。”

S007

Exactly, am I crazy?
真的，我是疯了吗？

Not at all, 100% sane.
完全没有，100% 清醒。

S008

And then things kind of built upon themselves,
然后事情就自然而然地发展起来了，

and we're like, maybe we could do a little more of this
我们在想，也许我们可以多做一点这个

and a little more of that.
再多做一点那个。

S009

What you'll see here, by the way, success is not guaranteed.
你们将在这里看到的，顺便说一句，成功是不保证的。

S010

It'll probably work, but if it doesn't work,
它大概率会起作用，但如果它不起作用，

we're at a safe distance.
我们处在一个安全的距离。

S011

Yes, let's fucking go. Let's see.
是的，让我们特么开始吧。我们来看看。

S012

Yes, but this is not an autonomous car.
是的，但这绝不是一辆自动驾驶汽车。

S013

Well, it is technically autonomous for this demo
嗯，在这次演示中它在技术上是自动驾驶的，

to make sure we don't kill anyone.
以确保我们不会杀死任何人。

S014

Just in case. But this will actually be, long-term,
以防万一。但这实际上将会是，长远来看，

the only manually driven car that Tesla makes.
特斯拉制造的唯一一款手动驾驶汽车。

S015

And so, if you're going to have only one manually driven car,
所以，如果你打算只拥有一辆手动驾驶汽车，

let's take it to the limits and way past the limits.
让我们把它推向极限，并远远超越极限。

S016

I think it's an insane dream.
我认为这是一个疯狂的梦。

Where are we guys? We got 10 seconds.
我们到哪了伙计们？我们还有 10 秒。

S017

Seven, should we count it down?
7秒，我们应该倒数吗？

S018

Well, it worked. Flying cars are real.
嗯，它成功了。飞行汽车是真的。

S019

A friend of mine, Peter Thiel, once said
我的一个朋友，彼得·蒂尔，曾经说过

that the future promised us flying cars,
未来承诺给我们飞行汽车，

but instead we got 140 characters.
但相反我们得到了 140 个字符。

S020

Well, not anymore. That's not the last thing you'll see, by the way.
好吧，现在不再是了。顺便说一句，这不是你将看到的最后一样东西。

S021

This car really sucks. It could suck the chrome off a trailer hitch,
这辆车真的很会吸。它能把镀铬从拖车挂钩上吸下来，

it could suck a tennis ball through a hose pipe,
它能把网球吸过橡胶水管，

and it could stick upside down.
并且它可以倒置吸附。

S022

Now you might say, how often do you want
现在你可能会说，你有多频繁想要

to stick upside down in a car? Maybe not that often.
倒着吸附在车里？也许不是那么频繁。

S023

But it actually has an actual benefit
但它实际上有一个真正的好处

on the track or just driving,
在赛道上或只是日常驾驶中，

where the downforce of the car means you can corner incredibly well.
那里汽车的下压力意味着你可以难以置信地好地过弯。

S024

It looks like you're breaking physics
它看起来就像你正在打破物理学

because the car sticks to the ground so hard.
因为汽车紧紧地贴在地面上如此用力。

S025

Acceleration, cornering, it's going to crush
加速度，过弯，它将粉碎

every track record that has ever existed.
曾经存在过的每一个赛道记录。

S026

Just to be clear, that is not a real human.
澄清一下，那不是一个真人。

S027

The car has obviously attitude control thrusters
汽车显然拥有姿态控制推进器

and main thrusters in the rear,
以及在尾部的主推进器，

so it can basically fly like a rocket.
所以它基本上可以像火箭一样飞行。

S028

It could do rolls, it could do crazy gymnastics,
它可以做翻滚，它可以做疯狂的体操，

whatever you want really.
无论你真正想要什么。

S029

Now I should say that this is not necessarily
现在我应该说，这并不一定

a safety-optimized car,
一辆安全优化的汽车，

but it takes the fun meter to 11 out of 10.
但它把乐趣计量表带到了 10 分之 11。

S030

That was just a little flight. Let's do a longer flight.
那只是一个短暂的飞行。我们来做个更长的飞行。

We can go further.
我们可以走得更远。

S031

This will be an actual car that's on the roads.
这将是一辆实际的在路上的汽车。

S032

I'm not sure it's necessarily legal in all jurisdictions,
我不确定它在所有司法管辖区内一定合法，

but there will be such a car that someone can own.
但会有这样一辆某人可以拥有的汽车。

S033

It's going to be pretty wild that you can have a rocket car.
你能拥有一辆火箭汽车将会是相当疯狂的。

S034

It's using an advanced, ultra-high-pressure air tank,
它使用的是先进的、超高压的储气罐，

so the car can recharge its air tank.
所以汽车可以重新充气它的储气罐。

S035

You don't need special propellant or anything like that;
你不需要特殊的推进剂或任何类似的东西；

it literally is just going to puff itself up
它字面上只是将自己充气膨胀起来

and be able to do these maneuvers whenever you'd like.
并能够在你想的时候做这些机动动作。

S036

The rear wing has a variable pitch,
尾翼有一个可变桨距，

so it can adjust the downforce dynamically.
所以它可以动态调整下压力。

S037

It will do it automatically based on what it calculates
它会自动做这件事，基于它计算出的东西

you need when you're going around a track.
当你在赛道上行驶时你需要（的东西）。

S038

Well, you got to break one second, obviously.
嗯，你必须打破一秒，显然地。

I tested this the other day.
我前几天测试了这个。

S039

Can we put it up, guys? Can we put the test up?
伙计们，我们能把它放出来吗？我们能把测试放出来吗？

This goes fast.
这个跑得很快。

S040

Well, I said less than one second.
嗯，我说过少于一秒。

S041

There are cars, and then there's one car
这世上有各种汽车，然后只有一辆车

that has Mach diamonds.
拥有马赫环（的汽车）。

S042

Yeah, 0.1 seconds, I think we'd destroy the human
是的，0.1秒，我认为我们会摧毁人类

if we did that.
如果我们那样做的话。

S043

We anticipate being able to do better than that.
我们预期能够做得比那个更好。

S044

It's like Newton's formula F=ma, or a=F/m,
它就像牛顿公式 F=ma，或者 a=F/m，

so as you increase force and decrease mass,
所以随着你增加力和减少质量，

you get more acceleration.
你得到了更多加速度。

S045

The production car will actually do better than that.
量产汽车实际上会做得比那个更好。

S046

We'll just ride the limit of not detaching the retina
我们将只是游走在不脱离视网膜的极限上

of the human in the car.
在车里的人类的（视网膜）。

S047

Top speed, of course, depends on your street,
最高速度，当然，取决于你的街道，

but it'll be a viable car.
但它将是一辆可行的车。

S048

We're going to have a follow-on demo, or two, or four multiples.
我们将会有一个后续的演示，或者两个，或者四个倍数。

S049

I don't know if this is possible or not,
我不知道这是否可能，

but some people may know about Evel Knievel's attempt
但有些人可能知道埃维尔·克尼维尔的尝试

to jump the Snake River Canyon. And we thought this was crazy.
去跳跃蛇河峡谷。并且我们认为这是疯狂的。

S050

We're going to have to go pretty fast to do that, like really fast.
我们将不得不开得相当快去做那个，像真的很快一样。

We're going to need a running start.
我们将会需要一个助跑起步。

S051

But the car can go over 230 miles per hour.
但这辆车能跑超过每小时 230 英里。

S052

Hopefully, we can get even faster, definitely much faster than that.
满怀希望地，我们可以变得甚至更快，绝对比那个快得多。

S053

Well, I think you've got to crack halfway to the speed of sound,
嗯，我认为你必须突破通往音速一半的路程，

maybe Mach 0.5 or a little higher.
也许是0.5马赫或高一点点。

S054

Challenge accepted. Where we're going, you don't need tires.
挑战接受。我们要去的地方，你不需要轮胎。

S055

Today marks the day that we build the first
今天标志着我们建造了第一辆（的日子）

world's best flying car and the last best driver's car.
世界上最好的飞行汽车以及最后也是最好的驾驶者之车。

S056

We enter production in 2028, actually for real.
我们在 2028 年进入生产，真的是来真的。

S057

> I think we might have one more little thing.
> 我认为我们可能还有一件小事情。
>
> Should we do it? Let's do the last thing.
> 我们应该做吗？让我们做最后一件事情。
